

sum13

Return the sum of the numbers in the array, returning 0 for an empty array. Except the number 13 is very unlucky, so it does not count and numbers that come immediately after a 13 also do not count.

```
sum13([1, 2, 2, 1]) → 6  
sum13([1, 1]) → 2  
sum13([1, 2, 2, 1, 13]) → 6
```
